

Make / Model & Related Stock Items

This option allows you to link parts to a selected job item so that when you work on that particular job item (vehicle, boat, lawn mower etc) you can finish up with a list of specific parts that fit that item.

You must then access the Job Item files from the Customer menu or the red toolbox shortcut icon from the toolbar. Next to the make/model fields you have a button that allows you to select a make and model for an item. When the make and model box appears you will have a list of make and models as well as a parts list that is allocated to the select make and model record. You are then able to add make and models or allocate parts to the make and models by using the appropriate insert buttons.

You must then select the make and model to be saved against the selected job item and then save the job item once the make and model is selected. This assigns that specific make and model and parts list to the selected job item.

In the Job Invoicing or Workshop Invoicing screen, when you select the P/Link Button you will be given a list of parts which are specific to the selected job item make and model. Regardless of the Job Item number (rego number, serial number etc) the list will be displayed due to the make and model linked to that job item.

the link automatically from your invoices, you get a catalogue make and model list that is tailored for your business using the part numbers that you use. AM-Win also records the number of each part that is used. This means that if a car for example takes 6 spark plugs then the invoicing system will recognise this and use 6 spark plugs.
